

## Diatomaceous Earth - 25 lb Bag

**Brand:** Bison

**Product Code:** Bis25de

**Availability:** 55

**Weight:** 0.00oz

**Dimensions:** 0.00ft x 0.00ft x 0.00ft

**Price:** \$34.99

### Description

- All-natural filtering media for de swimming pool filters
- Designed for use in above ground and in ground de filter systems
- High-grade de filter powder can filter down to 3-5 microns
- Diatomaceous earth consists of fossilized remains of diatoms, a type of hard-shelled algae
- Leaves water sparkling and crystal clear without clumping

Guidelines for Using *Diatomaceous Earth*

**SAFETY INFORMATION:** This product is a natural mineral. It is not toxic, but it is a respiratory irritant. Avoid breathing dust. Wear a dust mask and eye protection when handling. Wash hands after use. Do not use in confined spaces. Do not use in food or feed. Do not use in water. Do not use in contact with skin. Do not use in contact with eyes. Do not use in contact with clothing. Do not use in contact with hair. Do not use in contact with jewelry. Do not use in contact with footwear. Do not use in contact with vehicles. Do not use in contact with machinery. Do not use in contact with electrical equipment. Do not use in contact with flammable materials. Do not use in contact with oxidizing materials. Do not use in contact with acids. Do not use in contact with alkalis. Do not use in contact with organic solvents. Do not use in contact with strong acids. Do not use in contact with strong alkalis. Do not use in contact with strong oxidizing agents. Do not use in contact with strong reducing agents. Do not use in contact with strong acids. Do not use in contact with strong alkalis. Do not use in contact with strong oxidizing agents. Do not use in contact with strong reducing agents.

| DIATOMITE   |  |
|---|--|
| <b>DESCRIPTION:</b> Diatomite is a naturally occurring, amorphous, non-toxic, non-flammable, and non-corrosive mineral. It is composed of the fossilized remains of diatoms, which are microscopic, single-celled organisms that have a silica-based cell wall. Diatomite is used as a filter aid, absorbent, and filler in a wide variety of applications, including water filtration, food processing, and pharmaceuticals. | <b>PROPERTIES:</b> Diatomite has a high surface area, which gives it excellent adsorptive and absorbent properties. It is also highly porous and has a low density. Diatomite is chemically inert and does not react with most acids, alkalis, and organic solvents. It is also resistant to heat and cold.  |
| <b>APPLICATIONS:</b> Diatomite is used as a filter aid in a wide variety of applications, including water filtration, food processing, and pharmaceuticals. It is also used as an absorbent in a wide variety of applications, including oil spill cleanup and animal bedding. Diatomite is also used as a filler in a wide variety of applications, including paper, paint, and plastic.                                     | <b>SAFETY:</b> Diatomite is a natural mineral and is not toxic. However, it is a respiratory irritant. Avoid breathing dust. Wear a dust mask and eye protection when handling. Wash hands after use. Do not use in confined spaces. Do not use in food or feed. Do not use in water. Do not use in contact with skin. Do not use in contact with eyes. Do not use in contact with clothing. Do not use in contact with hair. Do not use in contact with jewelry. Do not use in contact with footwear. Do not use in contact with vehicles. Do not use in contact with machinery. Do not use in contact with electrical equipment. Do not use in contact with flammable materials. Do not use in contact with oxidizing materials. Do not use in contact with acids. Do not use in contact with alkalis. Do not use in contact with organic solvents. Do not use in contact with strong acids. Do not use in contact with strong alkalis. Do not use in contact with strong oxidizing agents. Do not use in contact with strong reducing agents. |
